DETAILED ACTION

Specification

1. Applicant is reminded of the proper language and format for an abstract of the disclosure.

The abstract should be in narrative form and generally limited to a single paragraph on a separate sheet within the range of 50 to 150 words. It is important that the abstract not exceed 150 words in length since the space provided for the abstract on the computer tape used by the printer is limited. **The form and legal phraseology often used in patent claims, such as "means" and "said," should be avoided.** The abstract should describe the disclosure sufficiently to assist readers in deciding whether there is a need for consulting the full patent text for details.

The language should be clear and concise and should not repeat information given in the title. It should avoid using phrases which can be implied, such as, "The disclosure concerns," "The disclosure defined by this invention," "The disclosure describes," etc.

2. The abstract of the disclosure is objected to because it contains legal phraseology. Correction is required. See MPEP § 608.01(b).

Information Disclosure Statement

3. The listing of references in the specification is not a proper information disclosure statement. 37 CFR 1.98(b) requires a list of all patents, publications, or other information submitted for consideration by the Office, and MPEP § 609.04(a) states, "the list may not be incorporated into the specification but must be submitted in a separate paper."

Therefore, unless the references have been cited by the examiner on form PTO-892, they have not been considered.

Claim Rejections - 35 USC § 112

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

2. Claims 1-12 are rejected as failing to define the invention in the manner required by 35 U.S.C. 112, second paragraph.

The claim(s) are narrative in form and replete with indefinite and functional or operational language. The structure which goes to make up the device must be clearly and positively specified. The structure must be organized and correlated in such a manner as to present a complete operative device. The claim(s) must be in one sentence form only. Note the format of the claims in the patent(s) cited.

In claim 1, line 4, the phrase "the perimeter edge" lacks antecedent basis.

In claim 1, line 5, the phrase "the vector path" lacks antecedent basis. In addition, it is unclear what is meant by the phrase "the vector path line part of said slit forms an indicia substrate retaining appendage".

In claim 1, line 8, the phrase “the indicia substrate” lacks antecedent basis. It is unclear if the applicant is positively reciting the indicia substrate in combination with the display.

It is unclear what is meant by the phrase “and wherein said indicia substrate is secured by surrounding, opposing, and retained curvature stresses when said display substrate is subjected to resulting stresses of directionally predetermined circumferential compression, curvature and retention of said compression”.

In claim 1, line 14, the phrase “said display substrate” lacks antecedent basis.

In claim 1, line 17, the phrase “said flexible display substrate” lacks antecedent basis.

In claim 2, it is unclear if the phrase “a completely through cut slit” is the same as the cut slit recited in claim 1.

In claim 3, line 3, the phrase “the elongated end tips” lacks antecedent basis.

In claims 2-12, it is unclear if the phrase “A substrate retaining display” is the same as the substrate retaining display recited on line 1 of claim 1.

Conclusion

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The following U. S. Patents are cited to show curved display devices: Weigel – 655,843, Galeone – 2,539,069, Rueppel – 3,133,367 and Sobesky – 2,862,318.
